- Skill India- Aviation Essential Training and Ticket Reservation
- Infosys- For Fundamental of Information Security
- APPLLO- for APT Exam
- Webinar- on Artificial Intelligence in Business Sustainability

PROJECT:

AI BASED RESUME SCREENING SYSTEM

Final Year BCA Project

Creating an AI-based resume screening system as a final year project involves developing software that uses artificial intelligence to evaluate and filter job applicants' resumes. The goal is to streamline the recruitment process by quickly identifying the most qualified candidates for a position. To humanize this process, the system should be designed to understand and weigh various elements of a resume, such as skills, experience, education, and even soft qualities like creativity or leadership potential, much like a human recruiter would.

ONLINE CERTIFICATION:

- Great Learning- Applications of AI
- Best Student Award
- Narcotics Control Bureau- Say No to Drugs
